

# How Franklin County, Ohio Modernized Government Experiences (GX) for Agency Staff and Residents Using Low-Code/No-Code Technology

# Agenda

- Team introductions
- Intro to FCDC & problems we faced
- Government Experience (GX) background & needs
- Unclaimed Funds Solution
- Future Plans
- Intro to Quickbase
- Q&A

# Speakers

**Adam Frumkin**

Chief Information Officer  
Franklin County Data Center

**John Proffitt**

Chief Digital Officer  
Franklin County Data Center

**Eric Nutt**

GX Development Manager  
Franklin County Data Center

**Jennifer Bensi**

Senior Strategic SLED  
Account Executive  
Quickbase

# What you will learn

1. Get an inside look into how Franklin County Data Center (FCDC) modernized their unclaimed funds process with a dynamic work management platform
2. Learn how to overcome challenges you'll ultimately face when streamlining fund management—and how to reap the benefits
3. See FCDC's roadmap for maximizing technology to enhance government experiences
4. Uncover lessons learned and best practices tailored for government entities aiming to modernize through low-code/no-code solutions

# About: FCDC

- What is FCDC
  - Infrastructure, Software, Security
  - Delivery + Customer Services
  - Financial + Procurement Services
- Problems to solve
  - shifting software dev trends
  - technical debt piling up
  - limited staff, high cost of skilled developers
- Intro to Quickbase via NACo in 2022

**MISSION:** *Through collaboration and innovation, provide cost-effective business-driven technology solutions that enable our partner agencies to offer services to the people and businesses of Franklin County*

[datacenter.FranklinCountyOhio.gov](http://datacenter.FranklinCountyOhio.gov)

# About: GX Foundry (a team at FCDC)

- Our path to GX (Government Experience)
  - 2022: initiated software turnaround / reorganization
  - Mission follows trend started by USDS, 18F, others
  - 2023: name, identity, mission clarified
- Our team
  - 6 : **GX Development** - custom software
  - 7 : **GX Platforms** - commercial software + services
  - 2 : **GX Concourse** - public web services (new team)
- Our platforms and apps
  - .NET, React/JavaScript, ColdFusion, SQL, IIS, Xamarin
  - **Quickbase**, OnBase, DocuSign, SharePoint/Teams, IntelliCloud, Jira/Confluence, SurveyMonkey
  - About 200 “products” from doc workflows to full-stack mobile apps

**GX**FOUNDRY

***MISSION:** We forge digital experiences to build trust in Franklin County*

[gxfoundry.FranklinCountyOhio.gov](http://gxfoundry.FranklinCountyOhio.gov)

# Challenges and a strategy

- Complex, layered software challenges
  - Tech debt ballooning from apps and platforms built but not sustained (COBOL, ColdFusion, OnBase, Kentico, mobile, etc.)
  - Software talent: high cost + high turnover
  - Small team could not build everything in full-stack model
- Strategic winner: **Low-code / no-code app infrastructure**
  - Reduces experience requirements
  - Speeds development
  - Most apps don't require a bespoke full-stack solution
  - Default / Typical choice: Microsoft Power Platform – “free” with M365

# “No one ever got fired for buying Microsoft”

## Microsoft Power Automate

Boost productivity by automating repetitive tasks and workflows with process automation.

## Microsoft Power Apps

Build and launch professional-grade apps and automate workflows without additional coding.

## Microsoft Power Pages

Create websites and customer solutions fast while securely storing and managing data.

## Microsoft Power BI

Guide decision making with stunning reports and real-time insights from across your organization.

## ***BUT...***

- Limited or non-existent documentation / limited or no support
- Products, features, licensing constantly changing
- Active Directory integration less useful for our federated county

# A new challenger arrives

- The Boss™ suggested we explore **Quickbase**
  - Seen at NACo conference
  - Skeptical! Resisted!
- What hooked us?
  - Low-code/no-code was right strategy; MS approach lackluster
  - NACo + Quickbase offered low-risk, free / low-cost, multi-month, actively supported, government-specific trial program
  - Compelling podcast with gov examples (esp. [Arizona episode](#))
  - Washington, DC city government example
  - Platforms from *focused* vendors are better than “checkbox” bundles

# Putting Quickbase to work

- First major project: **Unclaimed Funds**
  - Technical debt retirement
  - App interfaces used by public and internal staff
  - About \$4M under active management
  - Handles PII
- If Quickbase can do this, it can handle lots of smaller apps.

# Unclaimed Funds

- What are "Unclaimed Funds" and why are they important?
- The old solution
- The Quickbase solution: Hybrid App strategy
  - Wrote web front-end for public
  - Used Quickbase for staff interface
  - Connected both ends through APIs and custom code

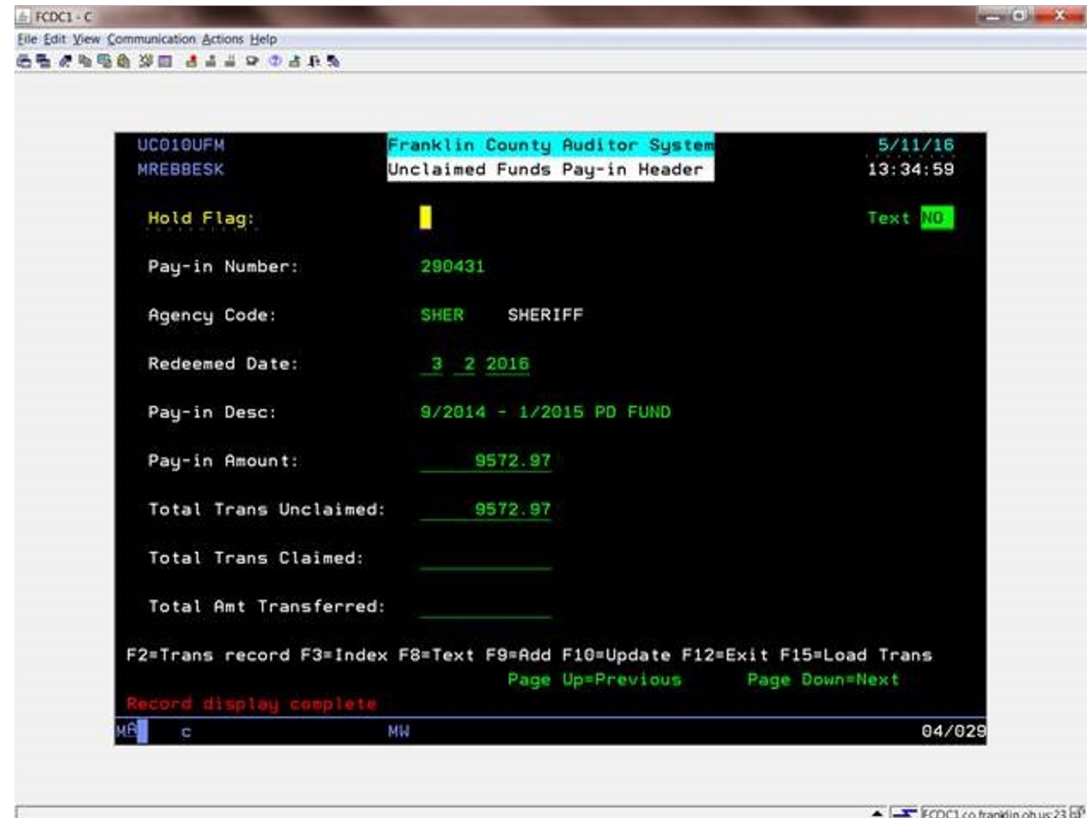

(this is not a typical "first app" to build)

# What are Unclaimed Funds?

- Monies paid out by government that have not been collected by the intended recipient(s).
- Governmental entities are required to maintain these and provide them if a valid claim is made.
- Examples:
  - Child support payments
  - Refunds from the Treasurer's office
  - Checks that have expired

# Unclaimed Funds - the old solution

- COBOL program
- IBM AS/400 midrange computer
- Green screens, arrow keys, function keys
- Not intuitive
- Prone to error

# Unclaimed Funds - the old solution

- Java 1.2
- 1990s web design

# Improving the GX of Unclaimed Funds

- What is Government Experience (GX)?
  - Government + UX + CX = **GX**
- Walking in the Customers' Shoes
  - Meet with the customers
  - See WHAT they do
  - Ask WHY they do it
- Service-Oriented Design
  - Quickbase was a logical choice

# Unclaimed Funds - thinking outside the box

- Hybrid Strategy
- Quickbase for the Administrators
- React for the General Public
- APIs and .NET to connect the two

Microsoft Teams

# Record Unclaimed Funds Demo

2024-03-04 16:36 UTC

Recorded by

McCormac, Luke M.

Organized by

Nutt, Eric A.

# Results

- **Rapid**
  - We launched in 4 months using 2 junior developers
    - no prior Quickbase experience
    - included React code, API and SQL calls, Quickbase interfaces
  - Would have normally taken 1 year (on platforms we knew)
  - Now we could do the same in half the time
- **Iterative**
  - Constant refinement
  - New features weekly
- **Intuitive**
  - Easy to learn & Easy to use

# Looking ahead: Our Quickbase strategy

## Phase 1 (done)

- Procurement
- Learn the platform
- Build / launch major app

## Phase 2 (doing)

- Major app refinement and expansion
- Expand to cover a laundry list of tech debt apps

## Phase 3 (to do)

- Open up to “citizen developers” in agencies
- Evangelize the platform, find more use cases

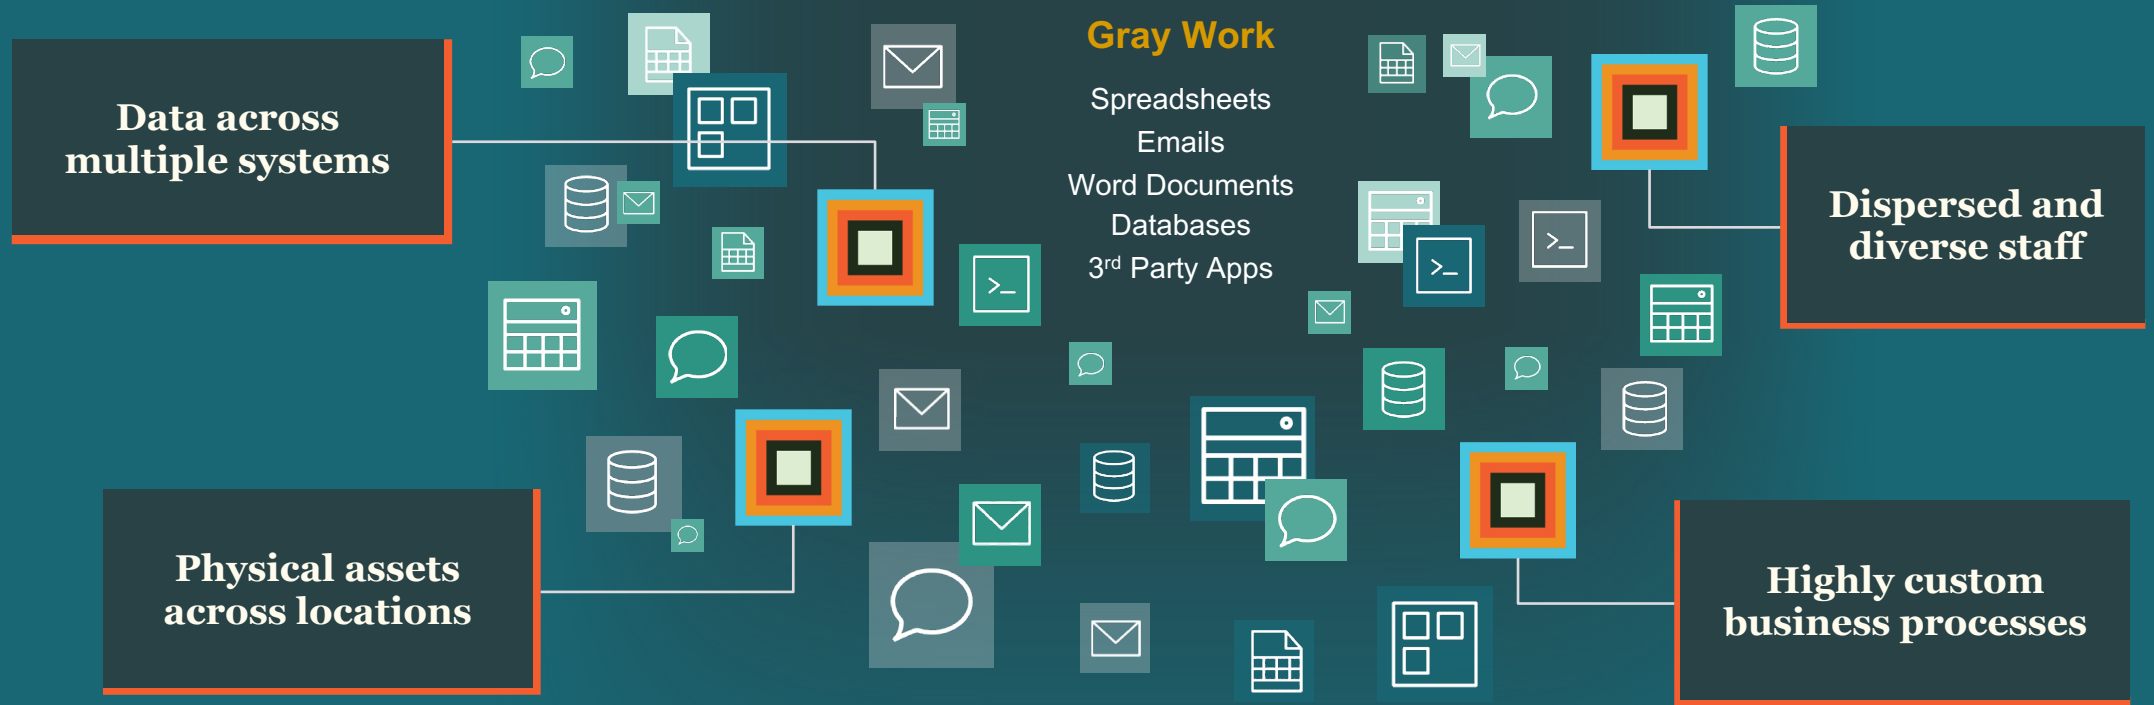

# Intro to Quickbase

# Gray work costs state and local government agencies billions in lost productivity

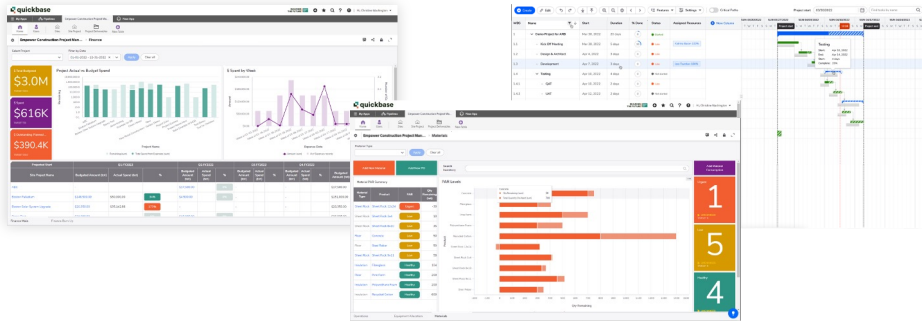

## The way work actually gets done

# Bringing people, information and systems together to work in harmony

**SEE:** The right people see the right data and project intelligence

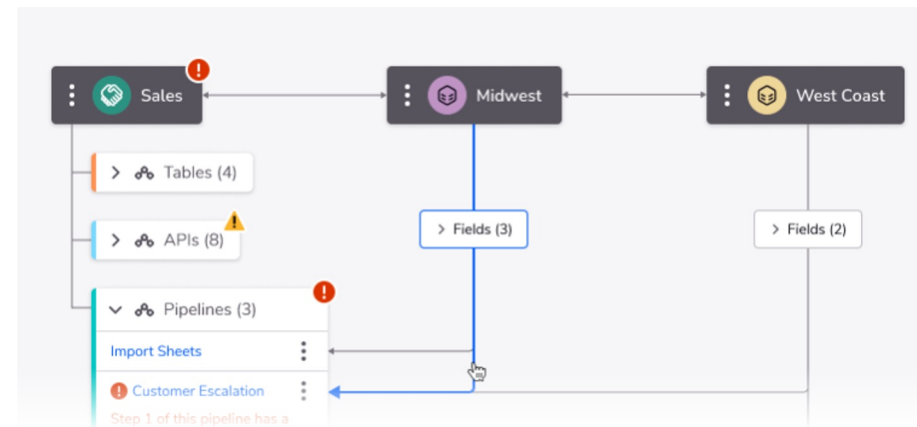

**CONNECT:** Drag and drop tools and APIs connect siloed systems

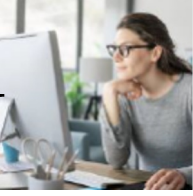

**CONTROL:** Business innovators configure applications for users

**CONTROL:** Admins control exactly who builds

# Built for Dynamic Teams

	<b>Business Leaders</b>	Department Leads and Managers	<b>Manage projects</b> , team coordination and execution	 <b>Insights</b>  <b>Mobile</b>
	<b>App Builders</b>	Excel and Database users	<b>Build custom workflows</b> , solving complex problems through apps	 <b>Builder</b>  <b>Automations</b>  <b>Integrations</b>  <b>Insights</b>
	<b>Tech Admins</b>	IT leaders, process leaders and CIOs	<b>Monitor project compliance</b> and governance and scale	 <b>Administration</b>  <b>Integrations</b>
	<b>Business Users</b>	Executives, field workers and everyday employees	<b>Manage tasks</b> , data entry and reporting	 <b>Insights</b>  <b>Mobile</b>
